

SERVICES

Each cabinet we make is custom made for a valued customer. This is the heart of our business. Once we receive an order, we review and engineer each cabinet. Our craftsmen will cut, fit, glue, clamp, sand, and finish each piece with a devoted eye toward quality.

Installation

We have a long history in cabinet installation and many of our manufacturing craftsmen have spent years in the installation part of the cabinet business. We make every effort to be installer friendly and often have recommendations on how to improve designs to maximize installation efficiency.

Dedicated to Environmental Programs

We are all making choices to help our environment such as using reusable grocery bags or lower energy home mechanical systems. Now you can go green with your custom cabinetry purchase. We offer NAUF (no added urea formaldehyde) products, and renewable resource wood species in our wood lines. Our new Infinity line uses recycled content along with NAUF. Because it is a laminate, it does not go through finishing, lowering emissions during the manufacturing process as well as in your home.
